

# Syed Aleem Zaigham Zaidi

Software Engineer | AI-First Developer

Lahore, Pakistan | +92 320 4067978 | aleemzaigham200@gmail.com | linkedin.com/in/aleem-zaigham-9740b0218

## PROFESSIONAL SUMMARY

---

Software Engineer with 3+ years of experience building automation systems, data acquisition and integration pipelines, and AI-integrated workflows. Hands-on with TypeScript and JavaScript across browser automation frameworks (Playwright, WebdriverIO, Puppeteer, Cypress, Selenium, Protractor) and Google Cloud Platform (Cloud Run, Cloud Functions, Pub/Sub, Cloud Scheduler, Cloud Storage). Experienced integrating LLM APIs to parse and normalize unstructured data, and shipping production work through CI/CD pipelines (GitHub Actions, GitLab CI/CD, Bamboo). Operates as an AI-first developer, using Cursor, GitHub Copilot, Claude, and ChatGPT daily to accelerate development, optimize code, and ship higher-quality features. Strong collaborator across product, engineering, and QA, with a track record of delivering reliable, production-grade software.

## TECHNICAL SKILLS

---

**Languages:** TypeScript, JavaScript, Node.js

**Browser Automation & Testing:** Playwright, WebdriverIO, Cypress, Selenium, Puppeteer, Protractor

**Cloud (Google Cloud Platform):** Cloud Run, Cloud Functions, Cloud Scheduler, Pub/Sub, Cloud Storage

**CI/CD:** GitHub Actions, GitLab CI/CD, Bamboo

**AI / LLM Integration:** LLM API integration, prompt engineering, data parsing and normalization with LLMs

**AI-Augmented Development:** Cursor, GitHub Copilot, Claude, ChatGPT (daily use for code generation, optimization, refactoring, and debugging)

**Web & Frameworks:** React, Redux, REST APIs

**Practices:** Test Automation, End-to-End Testing, API Testing, Data Integration Pipelines, ETL Workflows, Schema Mapping, Agile / Scrum

**Tools:** Git, GitHub, GitLab

## PROFESSIONAL EXPERIENCE

---

**Software Engineer**

*Arbisoft*

Nov 2022 – Present

*Lahore, Pakistan*

### Dental Insurance Data Platform (current)

- Automated end-to-end data acquisition and integration workflows across 30+ U.S. dental insurance provider portals, transforming heterogeneous source data into normalized schemas consumed by downstream product systems.
- Architected browser automation in TypeScript using Playwright and Puppeteer with resilient handling of dynamic UIs, authentication flows, and session management.
- Integrated LLM APIs into data pipelines to parse unstructured content and normalize field-level information into product schemas, reducing manual mapping effort and improving data quality.
- Built and operated services on Google Cloud Platform using Cloud Run, Cloud Functions, Cloud Scheduler, Pub/Sub, and Cloud Storage, designing event-driven workflows for scheduled and on-demand jobs.
- Developed strong domain knowledge of U.S. dental insurance (eligibility, benefits, coverage rules, and claims-related data) and applied it to schema design, validation, and data-quality checks.

## Travel Marketplace Test Automation

- Built and owned end-to-end automated test coverage for a major travel marketplace spanning multiple verticals, including flights, hotels, and car rentals.
- Authored comprehensive automation test cases across regression, smoke, and sanity test suites to validate critical user journeys and protect release stability.
- Led migration of the existing test framework from Protractor to WebdriverIO, designing a common framework wrapper and reusable abstraction layers (page objects, action helpers, and shared utilities) for a consistent migration path and unified test patterns across teams.
- Re-implemented and stabilized end-to-end flows across all verticals, achieving full coverage parity with the legacy suite while improving execution reliability and maintainability.

## Cross-Project Contributions

- Developed and maintained automated test suites across multiple web applications using WebdriverIO, Playwright, Cypress, Selenium, Protractor, and Puppeteer, ensuring broad coverage and early defect detection.
- Integrated automated tests into CI/CD pipelines using GitHub Actions, GitLab CI/CD, and Bamboo, accelerating release cycles and shortening developer feedback loops.
- Operate as an AI-first developer, using Cursor, GitHub Copilot, Claude, and ChatGPT daily for code generation, optimization, refactoring, and debugging to deliver higher-quality work faster.
- Partnered with cross-functional engineering, product, and QA teams to troubleshoot complex issues and ship production-grade automation and data-integration features.

## React Developer Intern

Arbisoft

Aug 2022 – Oct 2022

Lahore, Pakistan

- Completed an intensive internship focused on advanced JavaScript, React, and Redux.
- Built a full-scale Netflix-clone application using React for the UI and Redux for state management (including actions, reducers, and middleware) to model and manage complex application state.

## EDUCATION

---

### Bachelor of Science in Computer Science

Government College University, Lahore

2018 – 2022

Lahore, Pakistan

### Pre-Engineering Intermediate (FSc)

Punjab Group of Colleges

2016 – 2018

Lahore, Pakistan
